EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

The application has been amended as follows:

A) Cancel claims 64, 66 – 79.

2. The following is an examiner's statement of reasons for allowance:

With respect to claims 30, 31, 59, 60, the prior art fails to disclose, in combination with all the limitations, using capture electronics for capturing a pulsed electrical output energy and using at least one capacitor and one characteristic is the pulse width and voltage of the electrical energy and the adaptation is to select the value of the at least one capacitor based on the pulse width and voltage of the electrical energy.

With respect to claims 81, 82, the prior art fails to disclose, in combination with all the limitations, using capture electronics for capturing pulsed electrical energy, which maximizes the capture energy by adaptation to at least one characteristic of

the pulsed electrical energy and the capture electronics is made of at least two capacitors and one characteristic is the pulse width of the electrical energy and the adaptation is to enable the combination of the at least two capacitors based on the pulse width.

With respect to claims 87, the prior art fails to disclose, in combination with all the limitations, coupling an electrical energy converting device to the load-induced deflections of at least one tire inner wall, determining at least one feature of the electrical energy pulses, capturing the electrical pulses, adapting the capturing mechanism to maximize the electrical energy capture based on at least one feature of the pulses and at least one feature is the ratio of the pulse width to the resistance:

With respect to claims 89, 99, the prior art fails to disclose, in combination with all the limitations, a device adapted to be mounted on a rotating vehicle tire while rotating for maximizing the captured electrical pulsed energy generated and generating at least one energy pulse per tire rotation and having capture electronics for capturing the pulsed electrical output energy and the electronics monitors at least one characteristic of the pulse per revolution and the capture electronics comprises at least two energy storage capacitors and the adaptation comprises selecting the combination of the capacitors.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
